Don't

winding comprises a cable including at least one current-carrying conductor, and an electric field confining solid insulation covering surrounding the conductor, said conductor including a plurality of insulated conductive strands and at least one uninsulated conductive strand in contact with the cover said cable comprising

an inner semiconducting layer surrounding the conductor, and being in electrical contact therewith

an insulating layer of solid insulation surrounding the inner layer and being in intimate contact therewith, and

an outermost layer having semiconducting properties surrounding the insulating layer and being in intmate contact therewith, wherein each inner and outermost layer forms a substantially equipotential surface surrounding the conductor.--

## <u>REMARKS</u>

This Amendment is in response to the Office Action dated May 15, 2000 in which the examiner made certain formal objections to the drawings. Proposed drawing corrections are attached hereto. The objections are believed to have been overcome by the proposals herein.

The Examiner rejected the claims over certian references noted in the Official Action. The amedments herein are believe to place the claims in an allowable condition. Entry and allowance fothe claims is earnestly solicited.

Respectfully submitted,

John P. DeLyca
